PROFESSIONAL SUMMARY

AWS & Azure Multi-Cloud DevOps / Cloud Engineer with 1.3+ years of experience designing, automating, and operating secure, scalable, highly available cloud infrastructure and CI/CD pipelines. Hands-on expertise in Infrastructure as Code (Terraform, CloudFormation, Ansible), CI/CD pipeline engineering (Jenkins, Azure Pipelines, Argo CD), container orchestration (Docker, Kubernetes on AWS EKS and Azure AKS), and serverless computing (AWS Lambda, API Gateway, Azure Functions). Skilled in Linux and automation scripting in Bash. Proven record enforcing least-privilege IAM/RBAC security via Microsoft Entra ID, reducing deployment rollbacks by 25%, and lowering Mean Time to Recovery (MTTR) through proactive monitoring with CloudWatch, Azure Monitor, Prometheus, and Grafana. Supported mission-critical, enterprise-scale operations at Tata Consultancy Services across Dev/QA/Prod environments with 99%+ availability.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, EKS, Lambda, API Gateway, DynamoDB, CloudTrail, Route 53, CloudFront, ELB, CloudWatch, EBS), Microsoft Azure (Virtual Machines, Blob Storage, Virtual Networks/VNet, Entra ID & RBAC, AKS, Azure Functions, Azure Monitor, App Service)

Infrastructure as Code: Terraform (HCL), AWS CloudFormation, Ansible, Automation Scripting

CI/CD & Version Control: Jenkins (Declarative Pipelines), Azure DevOps Pipelines (YAML), Argo CD, Git, GitHub

Containers & Orchestration: Docker, Kubernetes (AWS EKS, Azure AKS), Helm, Microservices Architecture

Monitoring & Observability: AWS CloudWatch, Azure Monitor, Prometheus, Grafana, Incident Response, MTTR Reduction

Security & Identity: Microsoft Entra ID, Service Principals, RBAC, IAM Least-Privilege Access, Security Groups

Languages & OS: Bash/Shell Scripting, Linux

PROFESSIONAL EXPERIENCE

Assistant System Engineer Trainee — Tata Consultancy Services

British Airways

Sep 2024 – Dec 2025

- Administered hybrid AWS and Azure cloud infrastructure (EC2, S3, IAM, VPC, Azure Virtual Machines, Azure VNets) across Dev/QA/Prod environments, ensuring 99%+ availability for high-traffic operations.
- Configured Azure Blob Storage for application artifact repositories and enforced strict role-based access control (RBAC) using Microsoft Entra ID.
- Automated multi-cloud environment provisioning using Terraform, CloudFormation, and Ansible, improving deployment consistency and accelerating environment setup timelines.
- Engineered and optimized CI/CD workflows across Azure Pipelines, Jenkins, and Argo CD, collaborating with software engineers to troubleshoot build and deployment issues, reducing deployment rollbacks by 25%.
- Deployed automated, event-driven backend tasks using serverless Azure Functions and AWS Lambda.
- Orchestrated containerized microservices deployments using Docker, AWS EKS, and Azure Kubernetes Service (AKS).
- Built real-time operational dashboards using Azure Monitor, AWS CloudWatch, Prometheus, and Grafana; proactively investigated alerts and resolved production reliability issues, lowering Mean Time to Recovery (MTTR) within cross-functional Agile teams.

KEY PROJECTS

Serverless Tasks REST API Deployment on AWS Free Tier using SAM & Jenkins Pipelines

- Designed and deployed a fully serverless, highly available REST API on AWS within Free Tier limits (ap-south-1 Mumbai region) using AWS Serverless Application Model (SAM) for Infrastructure as Code.
- Defined AWS Lambda, Amazon API Gateway, and Amazon DynamoDB resources via SAM templates.

Tools: AWS Lambda, API Gateway, DynamoDB, CloudFormation, Jenkins, Python 3.9, boto3, Git, GitHub

Automated Azure Linux Web App Deployment using Terraform & Azure DevOps CI/CD Pipelines

- Automated deployment of a Linux Web App on Microsoft Azure using modular Terraform (HCL) scripts, provisioning a Resource Group, App Service Plan, and Linux Web App as code.
- Secured pipeline-to-cloud authentication using Azure Entra ID Service Principals and Federated Credentials (Workload Identity Federation), adhering to least-privilege RBAC best practices.

Tools: Terraform, Microsoft Azure, Azure DevOps Pipelines, Azure Blob Storage, Entra ID, RBAC, Git, GitHub
